Skin Protector

Unique, soft and secure, the Convex skin protector has a **flexible foam backing** for added comfort and security. Specifically designed for flush or retracted stomas.

VitaDerm

VitaDerm is our advanced **integrated hydrocolloid** that adheres to the skin and continually improves over time.

Release Film

Extra thin with a large thumb tab, removing the film is easy. The measuring guide enables accurate and precise cutting.

Advanced Filter System

The controlled flow filter minimises the risk of pouch ballooning and pancaking, whilst also working as an effective deodoriser. The Drainable version has a **waterproof element**, which helps maintain its effectiveness.

Silky Soft Fabric

Your skin is able to breath comfortably through our strong and durable non-woven fabric, and any rustling sounds are minimised. The reinforced split fabric backing allows for easier and more accurate positioning of the pouch.

Pelican Select Convex is available in Closed, Drainable and Urostomy.

All convex pouches should only be used after consulting your stoma care nurse.
