# Closed and Drainable

## Convex Skin Protector

Designed for flush or retracted stomas, the Select Convex skin protector is designed to minimise leakage and aid prevention of sore skin. The ultra-thin, hypoallergenic skin protector moulds to fit the body contours, providing a safe and secure fit.

## Fabric

The soft fabric feels cool and comfortable against the skin, and is available in plain and teddy bear print.

## Clipless System

Quick and easy to clean, the velcro tab under the fabric cover tucks the outlet away and holds it securely in place.

## Waterproof Filter

The Drainable version features an improved filter system with a controlled flow for greater comfort. This feature significantly reduces the risk of pouch ballooning and pancaking.

## Urostomy

### Shape

The advanced pouch shape which is designed to minimise pooling, incorporates a comfortable backing behind the bung to ensure comfort.

### Bung

The outlet features a soft and flexible bung, and by squeezing, gives you the ability to control flow when emptying.
